

145-2 Spreader for suspension strut and steering parts

DESCRIPTION

The expanders for suspension strut and steering parts from the 145 series are used to safely and completely damage-free expand the mountings of suspension struts or steering parts from threads in the automotive industry and workshop. They are particularly suitable for the gentle expansion of clamp fits on aluminium chassis. The small and handy design of the 145 series makes it an ideal problem solver, especially in very tight and awkward spaces.

RANGE OF APPLICATION

For safe and absolutely damage-free expansion of the mounts of suspension struts or steering parts of threads

BENEFIT

- The suspension strut can be installed and removed in a single work step and without additional effort
- It is impossible for the tool to slip off due to the screw connection on the crossbar or support arm
- The ball-bearing nut easily withstands the expansion forces specified by the automotive industry

OPERATION

- Fitting the spreader to the part
- Firmly fix the joint by actuating the hexagon and spread out the part

MASTER DATA

GTIN [EAN]	4021176123337
Country of origin	DE
Case material	Tool steel
Series	145
Net weight [kg]	0,245 kg
Package contents	1 piece
Packaging Act	PAP 21
